	TRIOS Patient Specific Motion	●	●	Upgrade to TRIOS 3

* AI scan technology: Facilitates scanning by removing unnecessary soft tissue as you scan

coDiagnostiX® implant planning software

Greater efficiency for your practice – fewer sessions for the patient.

A valuable component between analog and digital

coDiagnostiX® is a powerful yet user-friendly open software complete solution that can be used to plan and design implants and highly accurate, patient-specific surgical drill templates for guided surgery.

- Powerful planning and design tools for a wide variety of requirements
- Integration of surgical and prosthetic workflows
- Simplifies the planning of complex restorations
- Integrated communication platform for collaborative planning by the practice and laboratory
- Choice of various software variants for simple or complex cases
- Optimal digital backward planning

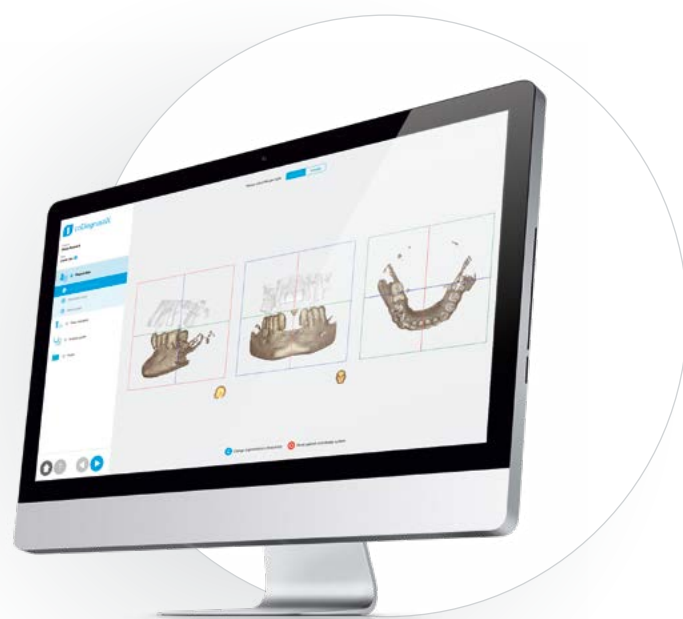

Straumann® CARES® Visual Chairside

The digital backbone for all Straumann® CARES® Digital solutions.

The open design software Straumann® CARES® Visual Chairside be expanded into a complete practice solution and is compatible with: intraoral scanner, model scanner and milling system. The software supports a wide range of indications. Allows for input and output of .STL files for 3rd party systems support.

FIRST-CLASS BENEFITS FOR THE CODIAGNOSTIX® SOFTWARE FOR

-  greater safety
-  patient briefing through clear and visually-supported communication
-  faster implementation through in-house production of surgical templates or production in the local laboratory
-  complex treatment workflows visualized (immediate solutions)
-  comprehensive case documentation

-  **PRECISION**
Integrates predefined milling parameters.
-  **RELIABILITY**
Seamless integration with C series chairside milling machine.
-  **REDUCED COMPLEXITY**
The advanced Tooth-Chain technology computes the shape of the proposed restoration, including anatomy, cusps, marginal ridges and emergence profile, by analyzing and mimicking the anatomical features of the adjacent teeth. Occlusion is automatically computed from the antagonist teeth.
