NEODENT® & CARES®

ACCESS TO THE EFFICIENT *
SOLUTIONS.

WORKING WITH TAILORED, ESTHETIC AND TRUSTED SOLUTIONS

Get comprehensive solutions of restorative options thanks to CARES®.

Neodent® solutions are available with CARES®, which is intended to drive efficient workflows and provide cost effective restorations for dental laboratories:

- Customized abutments (Titanium or CoCr);
- Titanium Bases with customized crowns/bridges;
- CARES® Screw Retained Bars and Bridges – SRBBs;
- Sleeves and Fixation pin for Guided Surgery;
- 3D printed model with hybrid analogs.

Neodent® along with CARES® ensure the consistent quality of all original Neodent® components through high-precision manufacturing and exceedingly thorough inspection processes.

VALIDATED WORKFLOW WHICH GIVES YOU CONFIDENCE

Neodent® provides to the customers freedom to achieve reliable, efficient and esthetic prosthetic solutions through a validated workflow handled by CARES® experts. CARES® carefully reviews the performance in each step of the prosthetic creation – from the selection of the raw materials, the scan and design interface to the reliable accuracy throughout the production.

Esthetic and design flexibility with customized abutment

The high design flexibility combined with the high standards of precision make our customized abutments an outstanding benefit for practitioners and dental technicians alike.

This solution is also available for CARES X-Stream workflow, receiving the customized abutment and the corresponding restoration delivered together.

An excellent solution for challenging and edentulous cases with CARES® Screw-retained Bars and Bridges

CARES® SRBBs consist of a broad range of design shapes and materials which allow to treat challenging cases also for edentulous situations on abutment level.

One-step prosthetic solution: 1 scan, 1 design, 1 delivery

CARES® X-Stream™ provides a full prosthetic solution, flexible in use, to restore Neodent® implants. With only one scan and one simultaneous and adaptive prosthetic element design, Titanium and Ceramic Bases and their relevant restoration crown and bridges are manufactured and arrive together in one delivery with an excellent fit between the components.

The Neodent® GM Smart Abutment is a unique patented solution combining a digital scanbody and a temporary abutment in a single component, part of Neodent® EasyPack solution.

The crown over Neodent® GM Smart Abutment is offered through centralized milling, enabling the access of PMMA temporary prosthesis by CARES workflow. Neodent® GM Smart Abutment is not available individually. Only the milled crown is offered by CARES workflow.

CARES® Scan & Shape for Neodent®

CARES® Scan & Shape lets you benefit from the knowledge and experience of a highly trained team of CAD/CAM dental experts to provide a tailored design service. Customers can also take advantage of our scan and design services to complement their existing inlab workflow.

Without investing in any hardware and software, and without any specialized digital design knowledge required.

*For more detailed information, please see Scan&Shape material.

**CARES® Scan & Shape is available in some countries. Please contact your country sales representative for details.

Connectivity with CARES® System or 3rd party CAD/CAM systems

Plug and play into your CARES® Visual design software or your current Dental Wings® and 3Shape® software without having to invest in additional hardware. Eligible customers of Dental Wings® and 3Shape® from the selected countries have access to the CARES® prosthetic portfolio.

*Please verify the software availability with your sales representative
