

LESS INVASIVE
TREATMENT PLANS

Straumann® Biomaterials

Straumann® Emdogain® MI

Cultivating periodontal
regeneration.

 straumann®

Indications for Use:

Emdogain is intended as an adjunct to periodontal surgery as a topical application onto exposed root surfaces. Emdogain is indicated for the treatment of the following conditions:

- Intrabony defects due to moderate or severe periodontitis
- Mandibular degree II furcations with minimal interproximal bone loss
- Gingival recession defects in conjunction with surgical coverage procedures such as the coronally advanced flap technique
- Emdogain is also indicated for use in a minimally invasive surgical technique in esthetic zones to optimize tissue height for intrabony defects only

In cases of wide defects or where soft tissue support is desired, Straumann Emdogain can be used in conjunction with a bone graft materials.

Differentiate your practice and help your patients by offering a minimally invasive, regenerative, periodontal treatment with Straumann® Emdogain® MI.

True periodontal regeneration can be achieved in a minimally invasive way. Based on decades of clinical experience, periodontal pockets can be regenerated through minimally invasive periodontal procedures with Emdogain MI.

EFFECTIVE

Regenerate periodontal pockets.

EFFICIENT

Achieve results comparable to Periodontal flap surgery.

PATIENT COMFORT

Offers procedures that are less invasive.

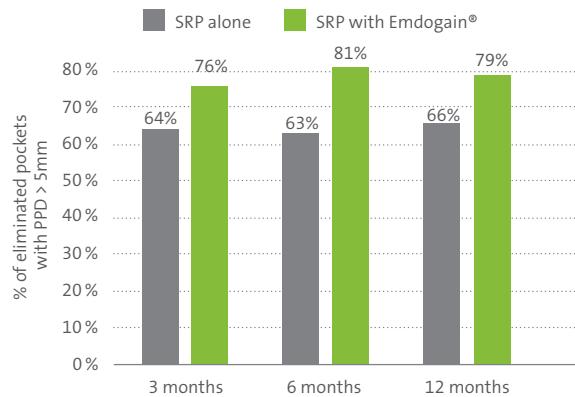

Adding Emdogain® MI to a minimally invasive periodontal procedure* can help you to regenerate periodontal tissue to reduce periodontal pockets, have more efficient procedures and improve the quality of life for your patients.

True periodontal regeneration as evidenced by the formation of new cementum, new periodontal ligament and new bone** in pre-clinical³ studies and clinical⁴ histological cases

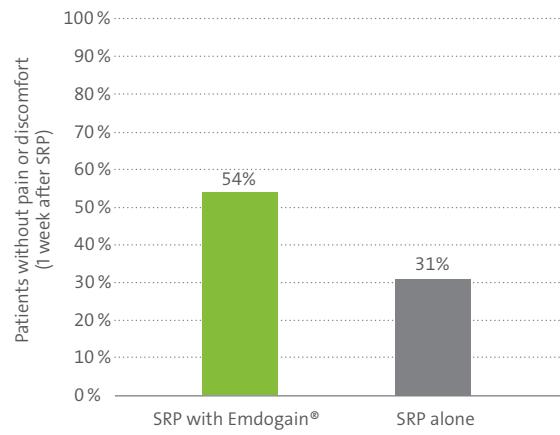

Significantly improved clinical results¹

Percentage of Pockets Regenerated following SRP alone Compared to SRP with Emdogain using a minimally invasive approach¹

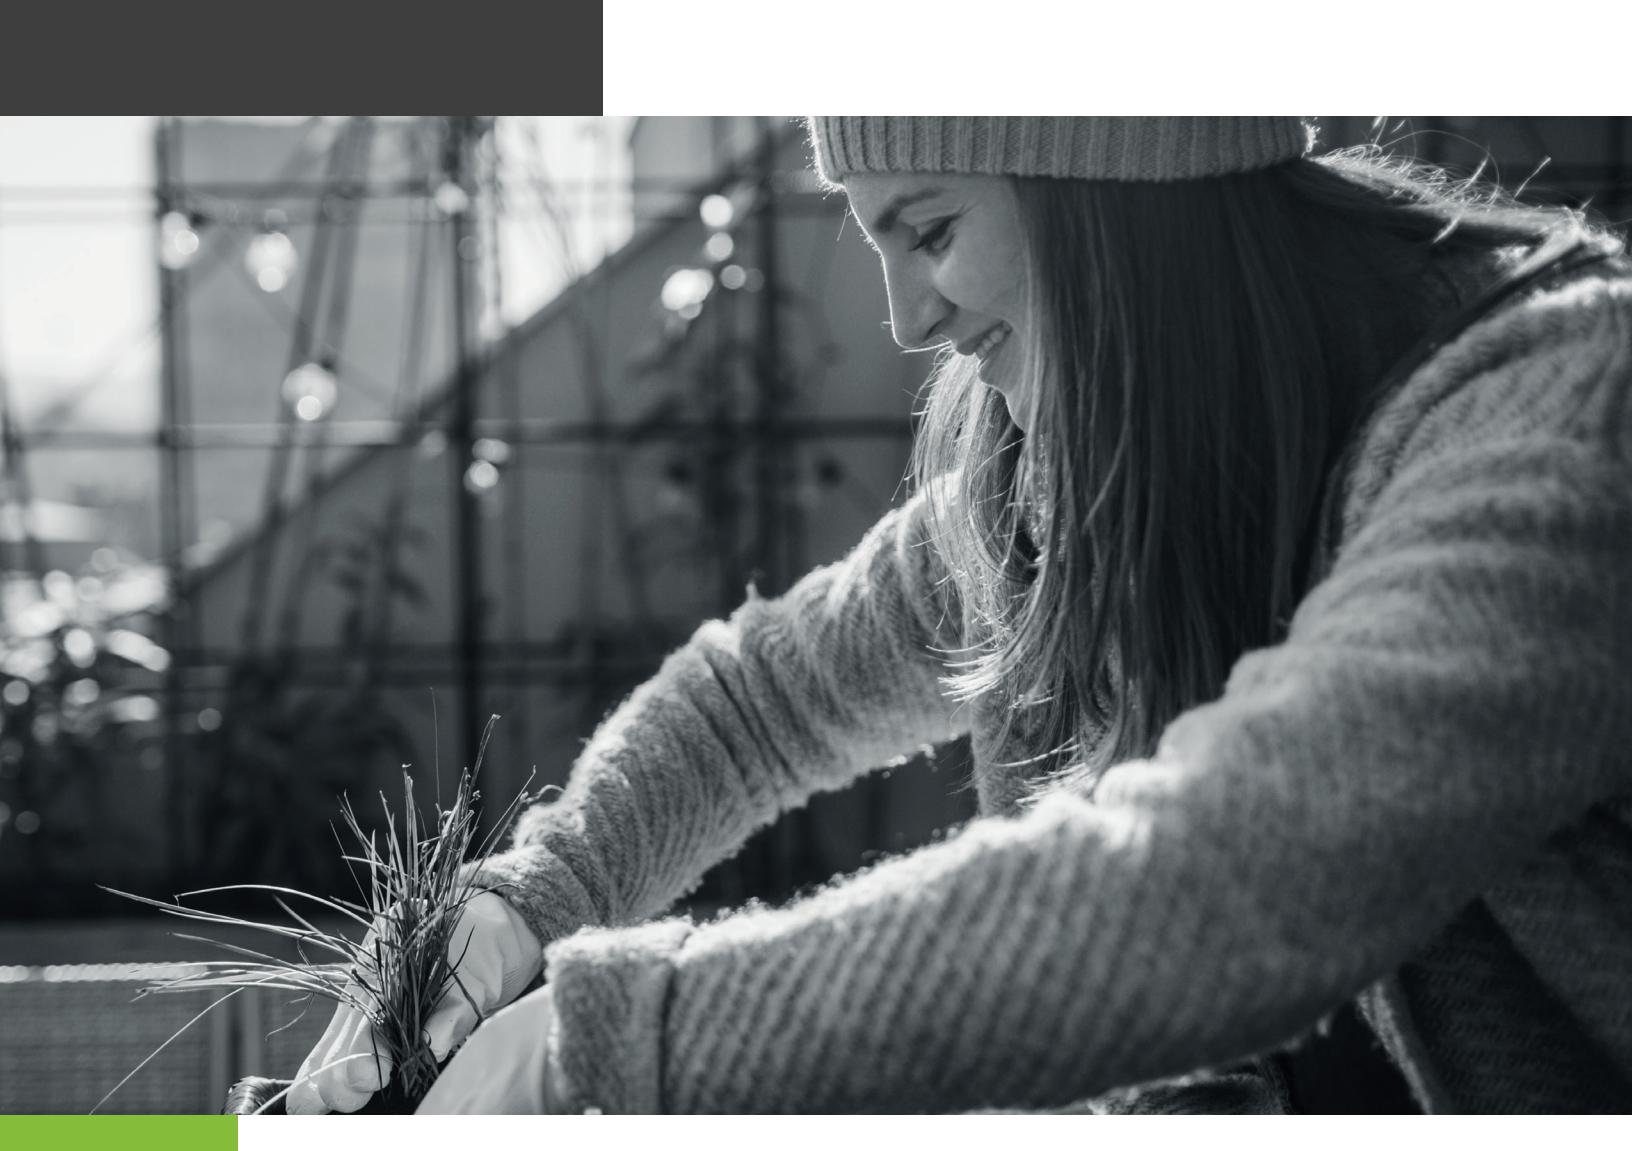

- Regenerate more periodontal pockets when using Emdogain MI and SRP, than just SRP alone¹

Percentage of Patients without Post-Treatment Discomfort²

- Patients report less post-surgical discomfort when SRP is used with Emdogain MI in a minimally invasive surgery, compared to just SRP alone²

* as described in the instructions for use for Emdogain® available at ifu.straumann.com
**only vertical bone-loss associated sites

3 YEAR RESULTS AFTER MINIMALLY INVASIVE PERIODONTAL REGENERATION WITH EMDOGAIN® MI

Left frontal incisor before treatment

PPD ≥ 9mm

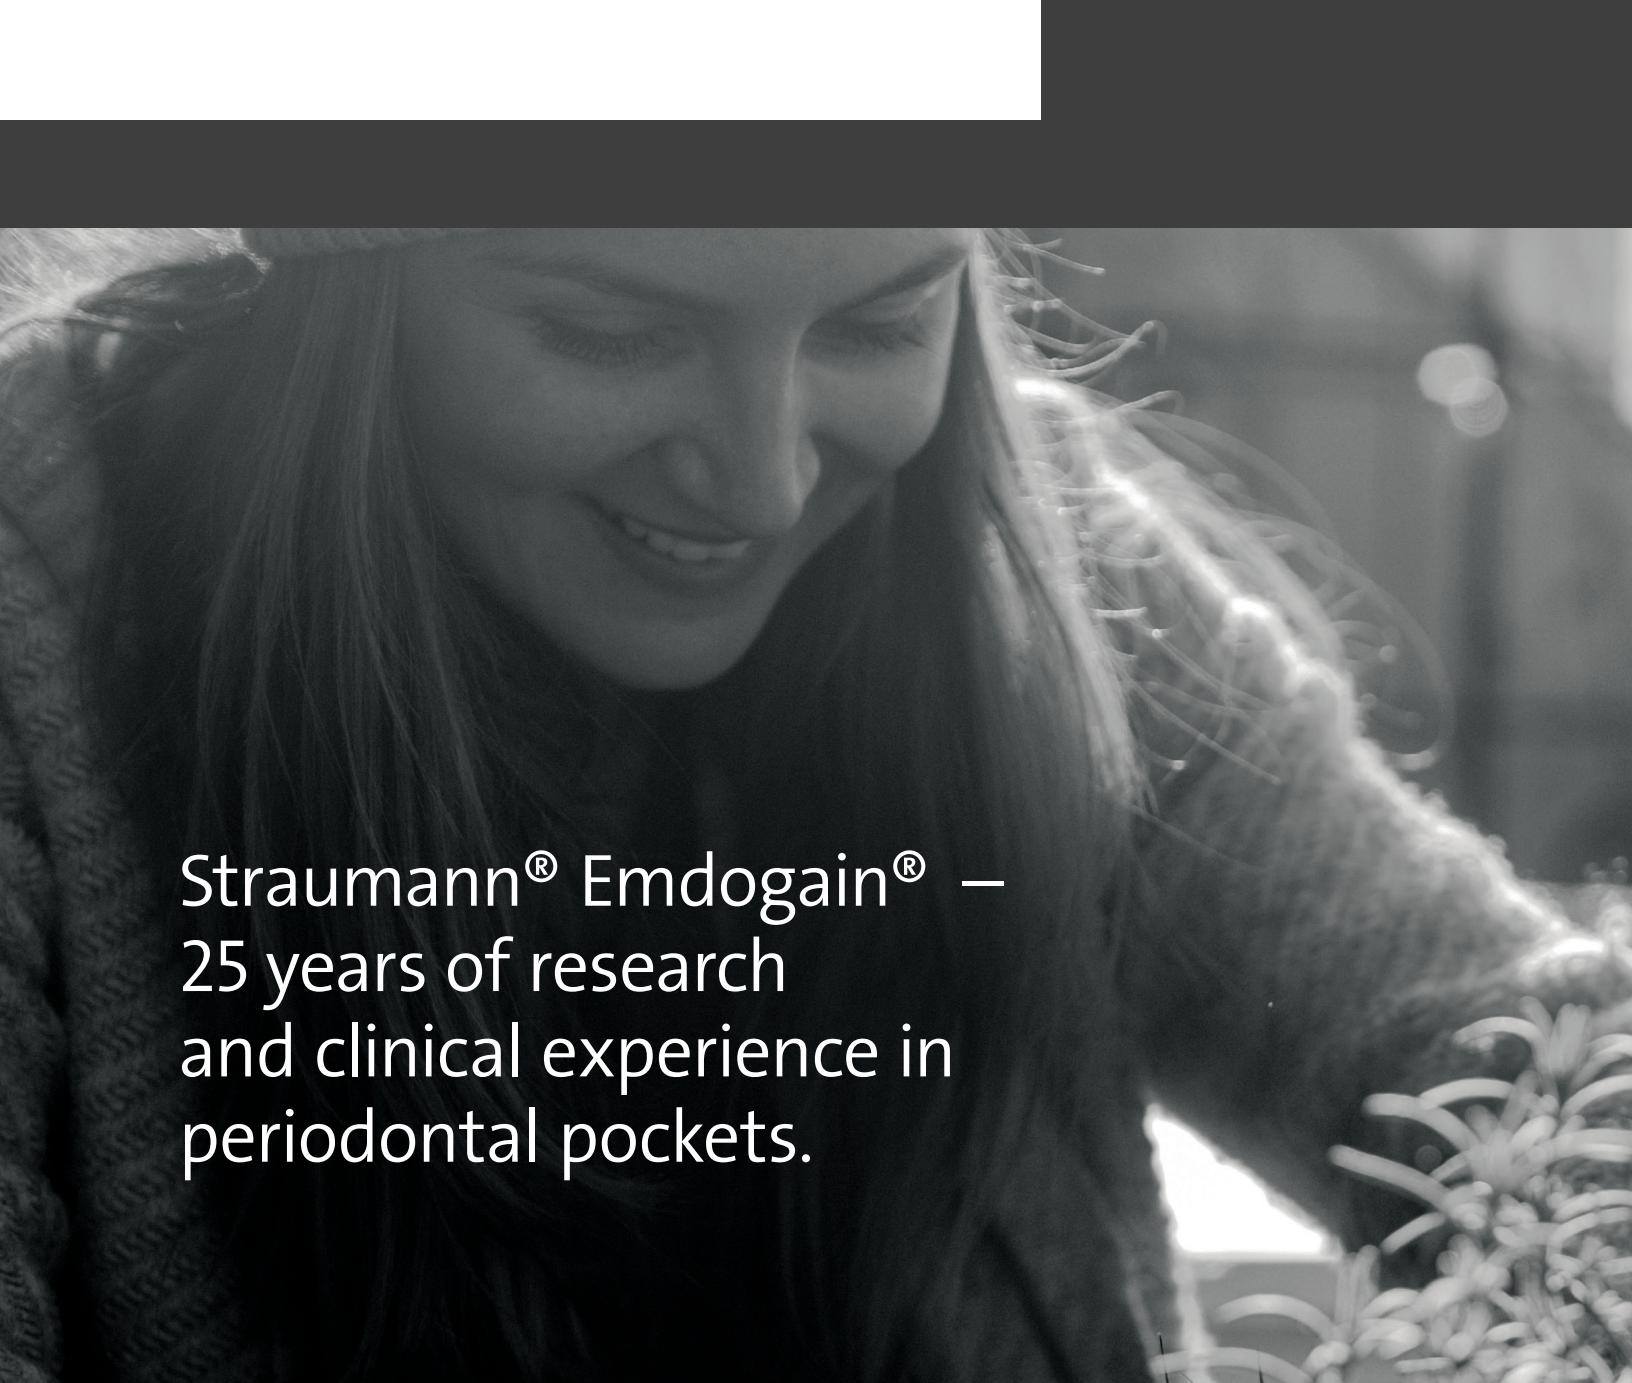

3 years after treatment with
Straumann® Emdogain® MI

PPD = 1–2 mm

Straumann® Emdogain® – 25 years of research and clinical experience in periodontal pockets.

Straumann Emdogain leads to true periodontal regeneration. Emdogain MI contains enamel matrix derivative – the active protein matrix responsible for tooth formation. When applied to cleaned tooth root surfaces, the unique protein composition in Straumann Emdogain MI is able to induce the regeneration of periodontal tissues: cementum, periodontal ligament and alveolar bone.

STRAUMANN® EMDOGAIN® MI – BASED ON A STRONG FOUNDATION

Straumann Emdogain is the gold standard for the safe and predictable regeneration of periodontal tissues lost as a result of periodontitis. Based on the foundation of long-term clinical experience, the unique regenerative properties of Emdogain MI can be used to regenerate and help save teeth as part of minimally invasive periodontal procedures.

STRAUMANN® EMDOGAIN® IN FACTS AND FIGURES

25 years on the market	> 600 clinical & 1,000 scientific publications**	Stable results documented over 10 years in 2 indications
> 2 million patients treated*	Extremely well tolerated***	

* Based on the number of syringes sold to date, globally

** According to PUBMED search for "Emdogain" or "enamel matrix derivative"

*** Based on a global post-surgical complication rate of less than 0.002 %

AVAILABLE IN THE FOLLOWING SIZES

Straumann Emdogain MI is available in two product sizes for the minimally invasive regenerative periodontal treatment of single or multiple pockets. Instructions for use recommend the use of PrefGel® prior to Emdogain application.

Article Number	Product Name	Contents
075.132	Emdogain® MI 0.15 ml	1x Emdogain® MI 0.15 ml 1x PrefGel® 0.6 ml 2x 23G x 1 inch cannulas for minimally invasive surgery
075.133	Emdogain® MI 0.3 ml	1x Emdogain® MI 0.3 ml 1x PrefGel® 0.6 ml 2x 23G x 1 inch cannulas for minimally invasive surgery

Straumann® Emdogain® MI

With Emdogain® MI, periodontal regeneration can be achieved in a minimally invasive way.

- **Effective:** Procedures are more effective as pockets are reduced due to regeneration of periodontal tissues during periodontal debridement procedures.
- **Efficient:** When Emdogain is used in a minimally invasive way, results are comparable to those of a Periodontal flap surgery.
- **Patient comfort:** Patients report less post-surgical discomfort following the use of Emdogain MI.
