1. The Straumann® PUREloc Retentive System for hybrid dentures

The Straumann® PUREloc Retentive System for hybrid dentures offers an innovative and highly esthetic ceramic edentulous solution for the two-piece PURE Ceramic Implant. The Straumann® PUREloc Abutment is only suitable for the two-piece PURE Ceramic Implant, however, it shares some of the Tools and Auxillaries with the Novaloc® portfolio. The straight Straumann® PUREloc abutments are available in various abutment heights, covering a broad range of clinical situations. Together with its durable PEEK\(^1\) matrices, the Straumann® PUREloc Retentive System provides a unique and long-lasting attachment performance.

1.1 Straumann® PUREloc Retentive System at a glance

1. PEEK matrix inserts offering excellent chemical and physical properties
   - Matrix accommodates up to 40° prosthetic divergence between two abutments
   - 6 retention strengths offer optimal adjustment of the denture retention
   - Matrix Housing available in titanium, or color-neutral PEEK for a more aesthetic outcome

2. Ceramic abutment offers a highly esthetic, smooth surface and ultimate hardness
   → for excellent esthetics and wear resistance

3. Compatible to the standard SCS Screw-driver
   → self-retaining system preventing aspiration
   → Small stud hole prevents food accumulation

4. Available in 6 abutment heights: 1 to 6 mm

5. Laser-marked abutment height and implant platform
   - Rely on the original implant-abutment connection
   → Perfectly matching components
   → Excellent service and support

\(^1\) Polyether ether ketone
2. Creating a new overdenture with the Straumann® PUREloc Retentive System

2.1 Procedure in the dental office
2.1.1 Selecting Straumann® PUREloc Abutment height

Step 1 – Selecting the abutment
- Ensure that the implant shoulder is not covered by hard or soft tissue
- Determine the appropriate abutment height by counting the marks on the Straumann® PUREloc Plan Abutment.

Step 2 – Inserting the Abutment
- Screw the Straumann® PUREloc Abutment tightly by hand into the implant using the Straumann® Screwdriver.
- Torque the abutment to 35 Ncm using the Ratchet, the Torque Control Device and the SCS Screwdriver.

Step 3 – Sealing the screw channel of the Straumann® PUREloc Abutment
- Use Teflon and composite in order to seal the screw channel of the Straumann® PUREloc Abutment.

Note:
A uniform horizontal height of all Straumann® PUREloc Abutments makes it easier for the patient to insert the prosthesis.
2.1.2 Impression taking – abutment-level

Step 1 – Placing the Forming/Fixing Matrix
- Place the Novaloc® Forming/Fixing Matrix on the Straumann® PUREloc Abutment.

Step 2 – Impression taking
- Use the mucodynamic technique for impression taking (vinyl polysiloxane or polyether rubber).
- Send the impression to the dental lab.

2.2 Procedure in the dental lab

2.2.1 Master cast – abutment-level impression

Step 1 – Inserting the Novaloc® Model Analog
- Insert the straight Novaloc® Model Analog into the Novaloc® Forming/Fixing Matrix (see chapter 3).

Step 2 – Fabricating the master cast
- Pour a master model using standard methods and type-4 dental stone (DIN 6873).

Note:
The master model can also be created with an implant-level impression.
2.2.2 Finalizing the new Straumann® PUREloc overdenture

Step 1 – Placing the Mounting Collar and Matrix Housing
- Place white Novaloc® Mounting collars on all Novaloc® Model Analogs.
- Place the Novaloc® Matrix Housing incl. preassembled Mounting Insert onto the Straumann® PUREloc Abutments.

Note:
For a chair-side polymerization of the Novaloc® Matrix Housing use the Novaloc® Processing Spacer to create the space needed.

Step 2 – Processing the overdenture
- Process the overdenture according to standard procedures.
- The dental lab will return the finalized Straumann® PUREloc overdenture to the dental office including the Mounting Inserts in place.
2.3 Procedure in the dental office

2.3.1 Seating the new Straumann® PUREloc overdenture

Step 1 – Removing the Mounting Insert
- Remove all Novaloc® Mounting Inserts from the Novaloc® Matrix Housing using the Demounting Tool for Mounting Inserts (blue) (see chapter 3).

Step 2 – Selecting and inserting the Retention Inserts
- Select the appropriate Novaloc® Retention Insert (see chapter 4).
- Insert the Novaloc® Retention Inserts to the Matrix Housing using the Mounting and Demounting Tool for Retention Inserts (brown) (see chapter 3).

Step 3 – Seating the finished overdenture
- Seat the finished overdenture and check the occlusion.
3. Using Novaloc® Tools for the Straumann® PUREloc Abutment

3.1 Novaloc® Matrix Housing Extractor (Fig. 1)
Removing the Novaloc® Matrix Housing from an overdenture
1. Heat the Novaloc® Matrix Housing Extractor head (Fig. 2).
2. Apply the hot Novaloc® Matrix Housing Extractor to the Matrix Housing and let the heat transfer for 2 – 3 seconds melting the resin around the Matrix Housing.
3. Tilt the Novaloc® Matrix Housing Extractor to the opposite side of the beak-shape end in order to remove the Novaloc® Matrix Housing (Fig. 3).

3.2 Novaloc® Demounting Tool for Mounting Inserts and Model Analog Reposition Aid (Fig. 4)
Removing the Novaloc® Mounting Insert
1. Insert the toe of the Novaloc® Demounting Tool into the Novaloc® Mounting Insert (Fig. 5).
2. Tip the Novaloc® Demounting Tool to the opposite side of the foot-shaped end and remove the Novaloc® Mounting Insert from the Novaloc® Matrix Housing (Fig. 6).

Placing the Novaloc® Model Analog
1. Pick up the Novaloc® Model Analog with the opposite side of the Novaloc® Demounting Tool (Fig. 7/8).
2. Position the Novaloc® Model Analog in the impression (Fig. 9).
3.3 Novaloc® Mounting and Demounting Tool for Retention Inserts (Fig. 11)

Mounting the Novaloc® Retention Insert
1. Pick up the Novaloc® Retention Insert with the gripper end of the Novaloc® Mounting and Demounting Tool. The Novaloc® Retention Insert will lock on to the tool (Fig. 12).
2. Place the Novaloc® Retention Insert into the Novaloc® Matrix Housing (Fig. 13). The Novaloc® Retention Insert "clicks" into position (Fig. 14).

Demounting the Novaloc® Retention Insert
1. Apply the plunger end of the Novaloc® Mounting and Demounting Tool to the Novaloc® Retention Insert and engage with light pressure (Fig. 15/16).
2. Remove the Novaloc® Retention Insert from the Novaloc® Matrix Housing using a slight rotational movement (Fig. 17).
3. Use the special indentation in the handle of the Novaloc® Matrix Housing Extractor (Fig. 1) to remove the Novaloc® Retention Insert from the Novaloc® Mounting and Demounting Tool with a tilting movement (Fig. 18/19).
4. Special featured Novaloc® Components for the Straumann® PUREloc System

Novaloc® Retention Inserts
The matrix system allows for a prosthetic insertion of up to +/- 20° divergence, meaning 40° between two Straumann® PUREloc Abutments.

Note:
It is recommended to use the light retention force first (white). In case it feels too loose for the patient, exchange with inserts with a higher retention force.

Novaloc® Mounting Collar
The Mounting Collar blocks out the area surrounding the abutment, preventing resin or bonding agents from flowing into the Matrix Housing and imbedding the abutment.

Novaloc® Matrix Housing, PEEK
The neutral-colored PEEK Matrix Housing is used for extremely labial or buccal implant positions preventing grey irritation coming from a titanium Matrix Housing.

Novaloc® Matrix Housing with attachment option
This Matrix Housing offers an extended attachment option. It is used for low-lying abutment heights or in situations requiring more retention. The attachment may be shortened according to the required height.

Novaloc® Mounting Insert
The Mounting Insert protects the interior of the Matrix Housing and keeps it in place during processing. Furthermore, it also prevents any resin or bonding agents from entering into the Matrix Housing during fixation.

Novaloc® Processing Spacer
The Processing Spacer is a placeholder for the Matrix Housing. It is used for the model-cast, cast metal-reinforced denture or if the Matrix Housing shall be polymerized into the overdenture chair-side.
