PATIENT COMFORT

Straumann® Biomaterials™ Biologics

Straumann® Emdogain® FL
Cultivating periodontal regeneration.
Straumann® Emdogain® FL
Differentiate your practice by offering a flapless regenerative periodontal treatment with Straumann® Emdogain® FL.

For the first time, true periodontal regeneration can be achieved in a minimally invasive way: without surgical flap.

Based on decades of clinical experience in regenerative flap surgery periodontal pockets up to 9 mm deep can now be regenerated and eliminated as part of flapless periodontal procedures with Emdogain® FL.

MORE EFFECTIVE
Eliminate more pockets.

MORE EFFICIENT
Achieve results comparable to periodontal flap surgery.

INCREASE PATIENT COMFORT
Render your procedures milder and more tolerable.
Adding Emdogain® FL to a flapless periodontal procedure can help you to eliminate more pockets, have more efficient procedures and improve the quality of life for your patients.

- Eliminate more pockets and render your procedures more effective
- Significantly improved clinical results

- Render your procedures more efficient with clinical results comparable to periodontal surgery
- Similar clinical results as when Emdogain® is applied with a flap surgery after 12 and 24 months²

- Improve the quality of life of patients by reducing pain, swelling and systemic inflammation
- Faster patient recovery

- True periodontal regeneration as evidenced by the formation of new cementum, new periodontal ligament and new bone in pre-clinical and clinical histological studies

Straumann® Emdogain® FL leads to true periodontal regeneration based on biomimicry. Emdogain® FL contains enamel matrix derivative – the active natural protein matrix responsible for tooth formation. When applied to cleaned tooth root surfaces the unique protein composition in Straumann Emdogain® FL is able to induce the regeneration of all periodontal tissues: gingiva, cementum, periodontal ligament and alveolar bone.
Straumann® Emdogain® FL – BASED ON A STRONG FOUNDATION

Straumann® Emdogain® is the gold standard for the safe and predictable regeneration of periodontal tissues lost as part of periodontitis or trauma. Based on the foundation of long-term clinical experience, the unique regenerative properties of the product have now been used to develop Emdogain® FL to regenerate and help save teeth as part of flapless periodontal procedures.

STRAUMANN® EMDOGAIN® IN FACTS AND FIGURES

> 20 years on the market
> 2 million patients treated*
> 600 clinical & 1,000 scientific publications**
Extremely well tolerated***
Stable results documented over 10 years in 2 indications

* Based on the number of syringes sold to date, globally
** According to PUBMED search for “Emdogain” or “enamel matrix derivative”
*** Based on a global post-surgical complication rate of less than 0.002 %

AVAILABLE IN THE FOLLOWING SIZES

Straumann® Emdogain® FL is available in two product sizes for the flapless regenerative periodontal treatment of single or multiple pockets.

With Emdogain® FL periodontal regeneration can be achieved in a minimally invasive way: without surgical flap.

- **Effective**: renders procedures more effective and eliminates more pockets as part of periodontal debridement procedures
- **Efficient**: renders procedures more efficient and acceptable by achieving results comparable to periodontal flap surgery
- **Patient comfort**: improves patient satisfaction and renders procedures more tolerable by reducing pain, swelling and systemic inflammation
