

STRAUMANN® EMDOGAIN® FL

Cultivating periodontal regeneration.

DIFFERENTIATE YOUR PRACTICE BY OFFERING A FLAPLESS REGENERATIVE PERIODONTAL TREATMENT WITH STRAUMANN® EMDOGAIN® FL.

For the first time, true periodontal regeneration can be achieved in a mini-mally invasive way: without surgical flap.

Based on decades of clinical experience in regenerative flap surgery periodontal pockets up to 9 mm deep can now be regenerated and eliminated as part of flapless periodontal procedures with Emdogain® FL.

MORE EFFECTIVE

Eliminate more pockets.

MORE EFFICIENT

Achieve results comparable to periodontal flap surgery.

INCREASE PATIENT COMFORT

Render your procedures milder and more tolerable.

3 YEAR **RESULTS** AFTER FLAPLESS PERIODONTAL REGENERATION WITH EMDOGAIN® FL.

Left frontal incisor before treatment

PPD \geq 9mm

3 years after treatment with
Straumann® Emdogain® FL

PPD = 1–2 mm

Adding Emdogain® FL to a flapless periodontal procedure* can help you to eliminate more pockets, have more efficient procedures and improve the quality of life for your patients.

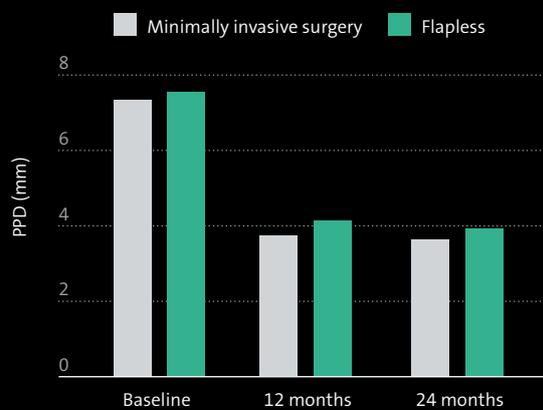

MORE EFFECTIVE

- Eliminate more pockets and render your procedures more effective
- Significantly improved clinical results¹

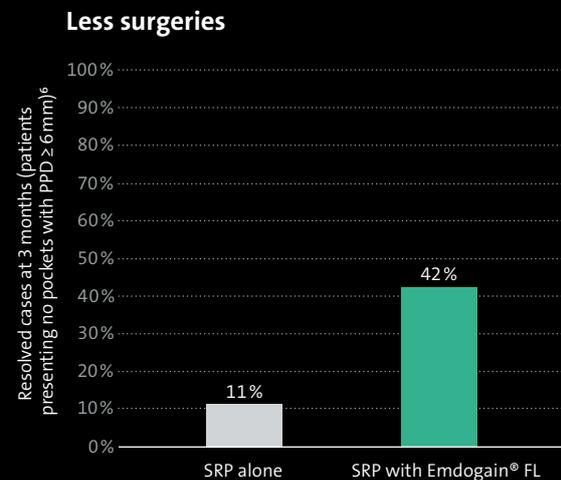

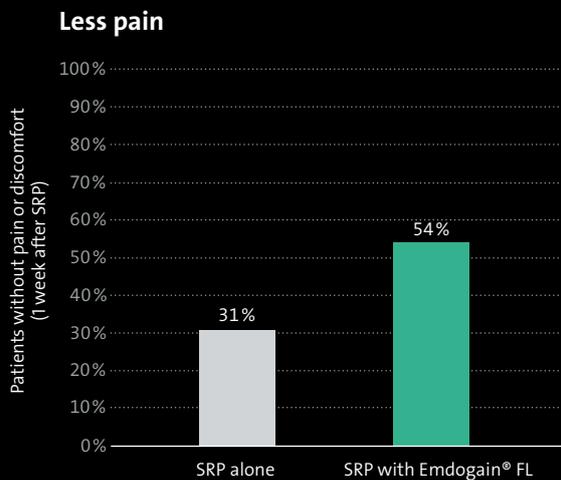

MORE EFFICIENT

- Render your procedures more efficient with clinical results comparable to periodontal surgery
- Similar clinical results as when Emdogain® is applied with a flap surgery after 12 and 24 months²

INCREASE PATIENT COMFORT

- Improve the quality of life of patients by reducing pain, swelling and systemic inflammation
- Faster patient³ recovery
- True periodontal regeneration as evidenced by the formation of new cementum, new periodontal ligament and new bone in pre-clinical⁴ and clinical⁵ histological studies

* as described in the instructions for use for Emdogain® FL available at ifu.straumann.com

STRAUMANN® EMDOGAIN® FL 20 YEARS OF RESEARCH AND CLINICAL **EXPERIENCE** IN PERIODONTAL POCKETS.

Straumann® Emdogain® FL leads to true periodontal regeneration based on biomimicry. Emdogain® FL contains enamel matrix derivative – the active natural protein matrix responsible for tooth formation. When applied to cleaned tooth root surfaces the unique protein composition in Straumann Emdogain® FL is able to induce the regeneration of all periodontal tissues: gingiva, cementum, periodontal ligament and alveolar bone.

STRAUMANN® EMDOGAIN® FL – BASED ON A STRONG FOUNDATION

Straumann® Emdogain® is the gold standard for the safe and predictable regeneration of periodontal tissues lost as part of periodontitis or trauma. Based on the foundation of long-term clinical

experience, the unique regenerative properties of the product have now been used to develop Emdogain® FL to regenerate and help save teeth as part of flapless peri-odontal procedures.

STRAUMANN® EMDOGAIN® IN FACTS AND FIGURES

> 25 years
on the market

**> 600 clinical
& 1,000 scientific
publications****

Stable results
documented
over 10 years
in two indications

> 2.5 million
patients treated*

Extremely
well tolerated***

* Based on the number of syringes sold to date, globally

** According to PUBMED search for "Emdogain" or "enamel matrix derivative"

*** Based on a global post-surgical complication rate of less than 0.003 %

AVAILABLE IN THE FOLLOWING SIZES

Straumann® Emdogain® FL is available in two product sizes for the flapless regenerative periodontal treatment of single or multiple pockets.

Article number	Product name	Contents
075.130	Emdogain® FL 0.15 ml	1× Emdogain® FL 0.15 ml
		1× PrefGel® 0.6 ml
		2× cannulas for flapless use
075.131	Emdogain® FL 0.3 ml	1× Emdogain® FL 0.3 ml
		1× PrefGel® 0.6 ml
		2× cannulas for flapless use

STRAUMANN® EMDOGAIN® FL

With Emdogain® FL periodontal regeneration can be achieved in a minimally invasive way: without surgical flap.

- Effective: renders procedures more effective and eliminates more pockets as part of periodontal debridement procedures
- Efficient: renders procedures more efficient and acceptable by achieving results comparable to periodontal flap surgery
- Patient comfort: improves patient satisfaction and renders procedures more tolerable by reducing pain, swelling and systemic inflammation
