

FOR YOUR PATIENTS

An orthodontic treatment is not just about the time spent at the practice. DM is the premium service your patients have been waiting for.

Exceptional care

With DM, patients receive relevant advice, crafted by you, and based on powerful analysis of their real-time progress. This means personalized care, with fewer incidents, and even remote assessment of emergencies. They know you're in control, and that **they're in good hands, always.**

Better appointments

Personalized care outside the practice means you can focus on what's important when you see your patients. The time spent at the practice will be optimized for all, with **more convenience to patients and parents.**

Inspiring motivation

Amaze patients and parents with real time progress reports. The DM App is a complete timeline of their treatment: they can see how far they've come with their previous photos, and access your past communication. **Patients can see their smile changing, keeping them motivated and engaged.**

DENTAL MONITORING[®]

Connected orthodontics

The only App
that transforms
patient care

BE THE HERO THEY'RE LOOKING FOR

Choosing DM is like building an extension of your practice, right inside the smartphones of your patients. DM helps you connect with all your patients, monitor and guide their treatment, and organize your team's workflow.

Engage with your patients

Connect with each of your patients effortlessly, at a scale you never thought possible.

Empower your team

Help your team plan ahead, stay focused, and deliver the best experience for your patients.

Elevate standards of care

Provide instant feedback to your patients wherever they are, every time they need it.

Set up your DM Live™

Choose the information you want to receive from over 120 clinical triggers detected by DM. Set up automatic messages and instructions to your patients and your team.

An app for home monitoring

From their own smartphone, patients are guided through DM Scans™: a series of intraoral images taken at a frequency you choose. Because the DM app is downloaded on your patients' phones, patients can take DM Scans wherever they are.

Intelligent image analysis

DM blends powerful algorithms with clinical insight to extract information from DM Scans™. Based on your DM Live™ settings, you receive notifications that are clinically relevant, important to you, and timely.

Multiply patient engagement

Each of your patients will receive automatically your individual feedback on their treatment after every DM Scan. Each message is in your own words, and can come in unlimited variations. Your patients receive the right advice at the right time... because it comes from you.

Infuse your team with confidence

Your team instructions are matched to the messages sent to your patients. Your preset instructions will help your team prioritize their tasks and stay on top of things. Your patients will enjoy a seamless experience at every point.
