Gateway to professional learning

More than creating smiles
Restoring confidence

Dental Service Organization
Global Courses 2020
When it comes to training, the expectations of dental professionals today are higher than ever before. Every dental professional is unique and benefits from individual training. Straumann® stands for variety and innovation. This means that we offer the perfect life-long professional education in more than 70 countries addressing the needs of dentists, dental technicians and dental assistants throughout their career.

Continuous professional growth is one of the most important topics for dental professionals. Our aim is to provide a comprehensive, lifelong education and training program on surgical and restorative procedures with the latest technologies available on all levels of complexity. This means we offer educational programs ranging from the fundamentals of dental implantology to very complex procedures. This ensures that you are equipped to grow professionally and personally at every stage of your professional life.

We invite you to an educational journey with us!

The Straumann Group Dental Service Organization Team

Educational Pathways for professional growth – for the entire dental team

### Get started

#### LEVEL 1

**New to Implantology:** These courses will allow you to perform surgical and prosthetic procedures in cases that are less complex and have predictable esthetic and functional outcomes.

**Courses include:**
- Diagnostics, treatment planning
- Digital planning and solutions
- Patient communication
- Surgical and prosthetic implant procedures, from single tooth, multiple, overdenture
- Certification programs in implant dentistry

### Get experience

#### LEVEL 2

These courses allow you to **develop** your existing experience in Implant Dentistry.

**Courses include:**
- Soft tissue management
- Optimal provisionalization
- Guided bone regeneration (GBR)
- Immediate loading & placement
- Guided surgery
- Rehabilitation of the edentulous jaws with Straumann® ProArch™ and NeoArch™
- Digital dentistry

#### LEVEL 3

These courses will enable you to **treat challenging situations** using advanced treatment planning, complex surgical and prosthetic procedures. It requires significant experience in placing implants.

**Courses include:**
- Rehabilitation concepts for the edentulous patient
- Zygoma implant treatment concept
- Extensive and complex grafting

---

**Practice management**

These courses help the participants to grow professionally and financially by covering a variety of different topics designed for the entire dental team.
Ongoing professional education and lifelong learning starts with us. Straumann® is renowned for its outstanding role in Education and provides state-of-the-art training for dental professionals in more than 70 countries. Part of our commitment to our customers and patients is to provide a comprehensive, ongoing education and training program on surgical and restorative procedures with the latest technologies available and conducted by industry-leading experts from all around the world.

Neodent® – Progressive dental solutions combined with affordable economic value. Founded by dentists for dentists. Neodent® has grown to become one of the leading implant companies worldwide offering outstanding product performance with a proven track record of clinical success and professional and patient satisfaction. Neodent® implant solutions focus on progressive treatment concepts, such as immediacy, to enable advancement in dentistry and increase affordability.

Medentika® – Prosthetics perfected. Engineered and made in Germany. Medentika® is the leading manufacturer of compatible prosthetics. Medentika® has a passion for perfection and precision, that's why Medentika® compatible prosthetics come with a lifetime warranty. Medentika® supplies precision engineered implants, multi-platform components and abutments that are durable and fully compatible with all current implant systems at an affordable price. Many of the more than 70 connections are perceived as even better than the original.

Within education and research, Straumann® works closely with the International Team for Implantology (ITI), an independent, international network of eminent clinicians and researchers from leading clinics, research institutes and universities around the world. The ITI is providing a growing global network for life-long learning in implant dentistry through comprehensive quality education and innovative research for the benefit of the patient.

As Straumann® is a total solution provider for tooth replacement, we also work closely with botiss biomaterials. The botiss academy offers international educational events in dental bone and tissue regeneration.

Level 1

New to Implantology

These courses will allow you to perform surgical and prosthetic procedures in cases that are less complex and have predictable esthetic and functional outcomes.

Courses include:
• Diagnostics, treatment planning
• Digital planning and solutions
• Patient communication
• Surgical and prosthetic implant procedures, from single tooth, multiple, overdenture
• Certification programs in Implant dentistry
M1 – Intro to Implant Placement
Safe and Predictable Implant Placement

LEVEL 1: GET STARTED – CLINICIAN

HIGHLIGHTS This course is comprised of two starting days of implant surgery fundamentals. The days will provide learning strategies about safe and predictable implant placement. Interactive lectures will cover pre-requisite for successful treatment outcomes such as restorative driven treatment planning to begin the journey of placing dental implants. During day three participant will perform a live surgical procedure on a pre-selected patient provided by the institute.

The institute’s aligned focus is equipped to deliver the hands-on experience to ensure the development of incorporating the more simple cases to your practice leading to an understanding for more advanced surgical procedures. Implant treatments in the practice take patient service to the next level of specialized care.

This course is aimed at clinicians who want to include surgical and prosthetic implant dentistry in their practice or acquire a better understanding of implant placement.

THIS THREE-DAYS COURSE WILL ENABLE PARTICIPANTS TO:
- Precisely plan the treatment for an implant and its esthetics in the posterior region based on individual patient parameters
- Critically evaluate bone & soft tissue conditions and propose their management
- Confidently apply a predictable and safe surgical procedure with an esthetic restorative outcome
- Gain a thorough knowledge of important parameters for the health and integrity of the implant

EXPLORE THE CITY – LOS ANGELES
The Fundamentals in Restorative Driven Implant Dentistry to Get Started...

LEVEL 1: GET STARTED - CLINICIAN

HIGHLIGHTS This course is comprised of interactive lectures, hands-on sessions and patient treatment to optimize the learning experience to prepare clinician to start with more simple implant cases in their own practice. Lectures will cover the following aspects: restorative driven treatment planning; diagnostics; digital planning and its steps; patient communication and surgical and prosthetic implant procedures. The course will cover implant treatments for a single missing posterior tooth to multiple implant restorations, as well as how to perform an implant overdenture treatment. Providing implant treatments in a clinician’s own practice is to take service to the next level of patient care.

This course is aimed at clinicians who want to include surgical and prosthetic implant dentistry in their dental practice.

THIS TWO-DAYS COURSE WILL ENABLE PARTICIPANTS TO:

- Understand how to provide guidance on appropriate dental implant case selection based on individual patient needs
- Be able to implement core knowledge and workflows in implant dentistry
- Gain a knowledge of important parameters for the health and integrity of the implant
- Be able to apply simple implant treatment protocols under supervision in clinical practice
- Understand the Straumann® implant system and its surgical and restorative protocols

Start your own DSO implantology course supported by materials from Straumann Group
LEVEL 1: GET STARTED – CLINICAL TEAM

Straumann® Smart
Immerse to succeed.

DISCOVER THE WORLD OF IMPLANT DENTISTRY WITH US.

Immerse yourself in the world of implantology with Straumann® Smart.

Straumann® Smart is a holistic solution specifically developed to enable dentists to successfully start and continue placing and/or restoring dental implants in straightforward patient cases. Smart is designed to help dental professionals grow their implant business quickly and with confidence.

CLASSROOM TRAINING
An onsite curriculum combining clinical education and practical product training tailored to the needs of starters.

MENTORING
The possibility to one-on-one supervision by experienced implantologists or Straumann representatives to build confidence and provide peace of mind.

LAB COMMUNICATION
Guidelines on when and what to communicate to the dental technician.

SIMPLE PRODUCT PORTFOLIO
Helps reduce complexity by initially introducing only a limited number of key products.

PRACTICE AND PATIENT MARKETING
Training and demo materials for patient consultation and tools for online and offline practice marketing.

ACCELERATE YOUR LEARNING:
- Tailor and design your own learning starter course concept together with Straumann® SMART
- You can access online learning opportunities anytime, anyplace to speed up your learning
- Ready to use learning with own DSO trainers & expert mentors

THERE FOR YOU
Blended learning material & modules for a single implant foundational course ready to use

Neodent One
Medentika One
Educational Pathways for professional growth.
FOR THE ENTIRE DENTAL TEAM

Get Experience
Level 2-3 ■■■

Level 2 ■■■
Develop your existing experience

These courses allow you to develop your existing experience in Implant Dentistry.

Courses include:
• Soft tissue management
• Optimal provisionalization
• Guided bone regeneration (GBR)
• Immediate loading & placement
• Guided surgery
• Rehabilitation of the edentulous jaws with Straumann® ProArch™ and NeoArch™
• Digital dentistry

Level 3 ■■■
Treat challenging situations

These courses will enable you to treat challenging situations using advanced treatment planning, complex surgical and prosthetic procedures. It requires significant experience in placing implants.

Courses include:
• Rehabilitation concepts for the edentulous patient
• Zygoma Implant treatment concept
• Extensive and complex grafting
Mentoring 2 – Intermediate Extraction & Grafting
Perfect your skills in extraction and grafting techniques

LEVEL 2: GET EXPERIENCE – CLINICIAN

HIGHLIGHTS This course is comprised of extensive hands-on sessions and patient treatment to prepare the participants for hard and soft tissue management procedures in their own practice. Its about knowing how to maximize anatomical characteristics; soft tissue responses; clinical skills and the basic principles of augmenting hard and soft tissues.

A distinction will be made between what is clinically feasible to do with specific materials and procedures and what limitations and complications can be expected for each clinical scenario.

Learn how to design and transfer an optimized provisional restoration to support tissues to prepare for the final result.

This course is aimed at clinicians who want to expand their knowledge in tissue management to optimize esthetic outcomes.

THIS THREE-DAYS COURSE WILL ENABLE PARTICIPANTS TO:

- Be able to execute extraction techniques and corresponding preparations to support esthetic driven implant solutions
- Understand the advantages and options for handling hard and soft tissues optimally with the end result in mind
- Understand how to support tissues with connective tissue grafts
- Be able to implement intermediate hard and soft tissue procedures in daily practice

EXPLORE THE CITY – CHARLOTTE
MENTORING 3 – ADVANCED GUIDED SURGERY AND CT INTERPRETATION

DEVELOP YOUR SKILL SET FOR THE EDENTULOUS PATIENT

LEVEL 3: GET EXPERIENCE – CLINICIAN

HIGHLIGHTS  This course is comprised of hands-on sessions and patient treatment to prepare the participant for treating the edentulous patient based on patient-specific clinical parameters. It’s about knowing: how to select proper treatment protocols for the different resorption patterns of a jaw; when it is optimal to place shorter vs longer implants based on patient criteria; where tilted implants fit in the decision-making process; fixed vs fixed-removable solution and its benefits for final optimized outcomes; how to design the provisional restoration and what are the criteria for using an existing denture as provisional; denture conversion protocol for converting to a screw-retained provisional to support tissues.

This course is aimed at clinicians exposed to the fundamentals of implant esthetics who want to expand their knowledge in treating the edentulous patient for optimized outcomes.

THIS FOUR-DAYS COURSE WILL ENABLE PARTICIPANTS TO:
- Gain a thorough knowledge of the advantages selecting an optimal patient centered-treatment based on clinical criteria
- Have an in-deepth understanding of how CT (ConeBeam) scans and guided surgery principles can support the planning and its execution of the clinical procedure
- Precisely plan for the execution of the prosthetic, surgical and laboratory phases
- Efficiently implement the corresponding treatment workflows in dental clinics and laboratories

EXPLORE THE CITY – CHARLOTTE
From 3D Digital planning to Fixed Teeth
The Day of Surgery – New Innovation to Differentiate your Practice

LEVEL 2: GET EXPERIENCE – CLINICIAN

HIGHLIGHTS
This course is comprised of guided hands-on software sessions and training with 3D printed models of real patient, live surgery and interactive lecturer covering the following topics: how to maximize diagnostic information through the integration of CBCT scans versus traditional 2D radiographs; produce temporary teeth based on the 3D data; use of a CAD surgical template for precise single and multi-unit implant placements; how to more effectively communicate treatment plans to produce the temporary restoration prior to the implant placement so that the patient can leave the dental office with teeth in place on the same day as the surgery. During the course the participant will be able to watch 2 live surgeries as support for protocol.

This course is aimed at clinicians exposed to 3D digital treatment planning and guided surgery who wish to deepen their knowledge in this area.

THIS ONE-HALF DAYS COURSE WILL ENABLE PARTICIPANTS TO:
• Understand the advantages and capabilities of the coDiagnostiX software for treatment planning of clinical cases, including reduced costs and number of visits
• Implement guided surgery protocols and clinical workflows to deliver temporary restorations the day of surgery
• Get familiarized with smile in a box concept

Management of Peri-Implant Soft and Hard Tissue Deformities in the Esthetic Zone – Practice Today’s protocols

LEVEL 2: GET EXPERIENCE – CLINICIAN

HIGHLIGHTS This course is comprised of extensive hands-on sessions to prepare the participant for hard and soft tissue management procedures in own practice. Its about knowing how to maximize anatomical characteristics: soft tissue responses; clinical skills and the basic fundamental principles of augmenting hard and soft tissues. A distinction will be made between what is clinically feasible with specific materials and what limitations and complications can be expected for each clinical scenario.

Learn how to design and transfer an optimized provisional restoration to support tissues for the final result.

This course is aimed at clinicians exposed to the fundamentals of implant esthetics who want to expand their knowledge in tissue management to optimize esthetic outcomes.

THIS ONE-HALF COURSE WILL ENABLE PARTICIPANTS TO:

• Understand the advantages and options for handling hard and soft tissues optimally for an esthetic end result
• Get familiarized with clinical indications for guided bone regeneration (GBR) procedures ranging from single tooth to multiple restorations
• Understand how to support tissues in the esthetic zone for an immediate procedure
• Be able to implement intermediate clinical procedures in daily practice

Update on Innovation – Straumann® BLX in Simple to Advanced Situations, it’s WHY

LEVEL 2: GET EXPERIENCE – CLINICIAN

HIGHLIGHTS  Learn by the inventor how to use the BLX implant line as a benefit for the patient: implant placement in simple and advanced situations. Participants will experience live surgeries with the placement BLX implants, from single-tooth replacements to full arch rehabilitation.

The course addresses treatment planning, surgical and prosthetic aspects with immediate loading, and includes advanced surgical techniques for sinus lifting as well as soft and hard tissue grafting. A dedicated lecture will focus on the handling of complications delivered from Doctors personal experience. Learn tips and tricks from Dr Fromovich on how to reach optimal outcomes for the different indications.

This course is aimed at clinicians exposed to the fundamentals of implant esthetics who want to expand their knowledge in implant and tissue management to optimize esthetic outcomes.

THIS TWO-DAYS COURSE WILL ENABLE PARTICIPANTS TO:

• Understand the advantages and capabilities of the BLX product line in maximizing clinical outcomes
• Have knowledge about how to achieve bone and tissue stability by proper grafting techniques
• Be able to implement these BLX benefits in clinical practice

TEL AVIV, ISRAEL

LOCATION—Dental Clinic, Tel Aviv, Israel

EXPLORE THE CITY – TEL AVIV
This course is comprised of three day didactive lectures and live treatments. The days will provide learning strategies around:

Day 1: Theories and principles behind immediate protocols and four implants for a full arch rehabilitation; when and how to place four implants, two axial implants in the front and two tilted implants up to 45° in the posterior; how to provide a fixed bridge for the patients meeting the immediate loading criteria; biological, functional and esthetic parameters to support outcomes. Learn the protocols on how to overcome challenges.

Day 2 and 3: Clinicians are able to perform surgical patient treatments in the morning and deliver a fixed bridge in the afternoon; learn the established workflow for such a procedure and step-by-step protocol all led by guidance of a mentor.

This course is aimed at clinicians who wants to get knowledge and experience to treat more challenging patient cases in own practice with immediate full arch rehabilitation.

**THIS THREE-DAYS COURSE WILL ENABLE PARTICIPANTS TO:**
- Understand workflow between the clinical and laboratory teams and its parameters for a full arch treatment with tilted implants
- Critically evaluate when a patient is suitable for immediate loading protocols
- Be able to implement surgical and restorative protocols from start to finish with a team approach including planning, sequencing and its treatment efficiencies when back in practice
- Get familiarized with Neodent®, NeoArch steps to maximize treatment outcomes

Reconstructive periodontal and perimplant plastic surgery in the esthetic zone

**COURSE OVERVIEW** Reconstructive periodontal and perimplant plastic surgery in the esthetic zone

**COURSE TOPICS INCLUDE**

- Esthetic mucogingival surgery
- Soft tissue plastic surgery around implants

Esthetic mucogingival surgery for the coverage of single and multiple recession defects in the upper and lower jaw. Soft tissue plastic surgery around implants including surgical strategies for the coverage and prevention of soft tissue dehiscencies before, during and after implantation. This course includes live surgeries and hands on trainings to demonstrate and practice the acquired surgical techniques.

Watch the experts – Periodontology
Regenerative and Plastic-Esthetic Periodontal Surgery, Peri-Implantitis Surgery

COURSE OVERVIEW During one week the participants will have the possibility to follow the experts during the daily routine including non-surgical and surgical periodontal and peri-implant treatment procedures based on the Bernese synoptic treatment concept. A substantial part of the time will be dedicated to direct observation and/or assistance during conventional, regenerative and plastic-esthetic periodontal and/or peri-implant surgical procedures. Presentation of clinical cases will complete the program. Following this course, the participants will gain a more thorough understanding of the Bernese synoptic treatment concept for the successful management of the various periodontal and peri-implant conditions.

COURSE TOPICS INCLUDE
Surgical techniques
• Various periodontal surgical approaches including different types of flaps
• Regenerative periodontal surgery using various biomaterials, enamel matrix proteins or GTR
• The modified coronally advanced tunnel and the laterally closed tunnel for the treatment of single and multiple gingival recessions
• Nonsurgical and surgical procedures for the treatment of periimplantitis

EXPLORE THE CITY — BERN
An interactive 4-day course with Live Surgeries and Hands-on Workshops

For more than 20 years, implant esthetics has become a dominating topic in implant dentistry. The rehabilitation of partially edentulous patients with implant supported restorations in the anterior maxilla is challenging for involved clinicians due to the high esthetic expectations of patients. In addition, the anatomical situation is often complex with bone and/or soft tissue deficiencies, which are frequently present in the anterior maxilla.

This interactive CE course has been established 20 years ago for experienced colleagues in implant dentistry. It systematically presents the well documented treatment concepts for the handling of single tooth gaps or extended edentulous spaces in the anterior maxilla. These concepts have been developed over the years by our group providing successful esthetic outcomes with high predictability and a low risk of complications. All relevant aspects of diagnosis, esthetic risk assessment, treatment planning, step-by-step surgical procedures and prosthetic rehabilitation with provisional and definitive restorations will be presented and discussed. The speakers will address the biologic basis for current surgical and prosthetic procedures in various lectures. The surgical techniques including bone augmentation procedures with the GBR technique will be presented with different live surgeries.

On Saturday, the handling of esthetic complications and failures will be discussed. These complications and failures have significantly increased in recent years. Most of these failures are caused by improper treatment quality of involved clinicians, in particular the implant surgeon. In some cases, esthetic complications can be handled with an additional soft tissue augmentation procedure using connective tissue grafts from the palate.

However, the most important cause for esthetic failures is a facial implant malposition. In these cases, the implant must be removed and a new implant treatment is applied in most cases.

In addition to the lectures and live surgeries, two hands-on workshops complement the master course. SAC-Classification: Class A+C (advanced and complex).

Please note: Taking pictures and videos is strictly prohibited.
Master Course in Esthetic Implant Dentistry:
How to achieve good long-term Results with Implant Esthetics and how to handle Esthetic Complications and Failures.

COURSE TOPICS
- Fundamental esthetic principles revisited for implant restorations
- Esthetic risk assessment and basic surgical principles in the esthetic zone
- Bone healing in membrane protected defects: Bone grafts, bone substitutes and barrier membranes
- Ridge and soft tissue alterations in post extraction sites
- Extraction technique in implant patients & socket grafting: When and how?
- Implant placement post extraction: When immediate, when early, when late?
- Early implant placement with simultaneous Contour Augmentation using GBR
- Soft tissue conditioning with provisional restorations
- Definitive restorations with ceramo-metal or full-ceramic crowns or bridges
- Digital technology in esthetic implant dentistry: Where are we today?
- GBR procedures in complex situations
- Prosthetic handling of sites with multiple missing teeth
- Causes of esthetic implant complications and failures
- How to remove osseointegrated implants using the Reverse Torque Technique (RTT)
- How to use soft tissue augmentation at implants with a mild mucosal recession
- Surgical and prosthetic concepts to retreat patients following the removal of esthetically failed implants
- How to use the Pink Power Concept to compensate for vertical tissue deficiencies

Long-term studies with dental implants have clearly shown that a circumferential implant anchorage in bone is an important prerequisite for the long-term stability of implants. Hence, bone augmentation procedures have become routine in daily practice, and are used in roughly 60% of dental implants to improve the local bone volume. The two main surgical techniques for bone augmentation are the GBR technique, and the sinus floor elevation (SFE) procedure using either a simultaneous or a staged approach. Both techniques are used with composite grafts using two bone fillers with different characteristics. As first filler serve locally harvested autologous bone chips to accelerate the bone formation in the defect area. The second one is a low-substitution bovine bone filler for volume stability. These two bone fillers have synergistic characteristics, and thus optimize the regenerative outcome and the long-term stability of the augmented area. These fillers are normally covered with a membrane, most often a non-crosslinked collagen membrane. Both augmentation techniques provide excellent regenerative outcomes and long-term stability with high predictability as documented by numerous clinical 10-year studies. The speakers will present the biological basis for current surgical procedures in various lectures, and the criteria for the selection of appropriate biomaterials. State-of-the-art information will also be provided on 3D preoperative analysis of implant patients with anatomic borderline situations using CBCT. The GBR and SFE techniques will not only be presented and discussed in various lectures, but also demonstrated with 5 to 6 live surgeries.
Master Course in Bone Grafting Procedures: How to achieve excellent long-term Results with GBR and SinusFloor Elevation

COURSE TOPICS INCLUDE
- Oral anatomy in implant patients
- Cellular and molecular aspects of bone healing
- The power of autologous bone chips using the BCM (Bone Conditioned Medium) technique
- Bone healing in membrane-protected defects: What barrier membranes and what bone grafts and bone fillers are best suited for successful augmentation
- Hard and soft tissue alterations post extraction incl. socket grafting for ridge preservation
- Implant placement post-extraction: When immediate, when early, when late?
- Early implant placement with simultaneous Contour Augmentation using GBR
- SFE with the lateral window and with the Osteotome technique
- GBR procedures in the mandible
- GBR procedures in the mandible & complex cases
- Long-term results with GBR and SFE
- 5–6 Live surgeries with GBR and SFE procedures
- 2 hands-on workshops practicing the GBR and SFE technique

EXPLORE THE CITY—BERN

33
**COURSE OBJECTIVES**

This course is dedicated to the management of edentulous patients. Significant progress has been achieved in the prevention of caries and periodontitis in the last decades; therefore, elderly patients often retain their own teeth until late in life. However, edentulism is still a harsh reality for many. Losing all teeth is the “terminal outcome of a multifactorial process involving biological factors and patient-related factors” (Felton 2009). Edentulism constitutes a major oral disability in regard to function, aesthetics and psycho-social aspects.

Complete denture prosthetics has come a long way since Gysi, Ackermann or Gerber. Nowadays, there are rational procedures that will allow the practitioner to provide patients with functional and aesthetic complete dentures in a reduced number of clinical appointments, like the Biofunctional Prosthetic System (BPS). The knowledge of complete denture prosthodontics constitutes the basis for any implant-supported complete prosthesis.

Still, the use of osseointegrated implants for the stabilization of complete dentures is one of the great achievements of modern dentistry. Today, the proposed standard of care for edentulous patients is a conventional mucosa-born denture in the maxilla, and an implant-supported overdenture anchored on two implants in the mandible to ensure patient satisfaction and oral function.

However, many of our patients demand fixed prostheses for optimal comfort and function, but we need to discuss what is feasible in the specific anatomical condition.

The main topic of the course will focus on rational screw-retained fixed implant prostheses on ultra-short 4 mm implants applying the BPS Workflow, virtual planning and guided surgery. The course will also discuss the management of edentulous patients who are often old and may become frail. Finally, the course is complemented with an overview on removable implant prosthetics and Narrow Diameter Implants and Mini Dental Implants.

The course will include two live surgeries, one live prosthetic demonstration, hands-on courses with virtual planning and an insertion of extra-short implants in a jaw model.
Master Course on Implant Therapy in Edentulous Patients: A Clinical Challenge

COURSE TOPICS INCLUDE
- Specific aspects of edentulism: epidemiology and patient profile
- Medical aspects in elderly patients
- Anatomy of edentulous patients
- Treatment concepts and loading protocols for edentulous patients
- Virtual planning for full arch reconstructions in the edentulous patient
- Guided surgery for full arch reconstructions in the edentulous patient
- Live surgeries: Implant placement in the edentulous jaw
- Live prosthetics: The modified BPS Workflow
- Clinical and laboratory workflows for implant-supported fixed prostheses in edentulous jaws with a reasonable cost/benefit ratio: the modified
- BPS workflow for Pro Arch TL reconstructions
- Zirconium based fixed dental prostheses
- Impact of implant reconstructions on oral function and quality of life
- Dentures 2020: All digital? An insight in the present and in the future of complete denture prosthetics.
- How to optimize conventional dentures
- Esthetic outcomes with Pro Arch TL Reconstructions
- Overview on attachment systems for implant-overdentures: the Bern concept
- Alternative options with one-piece Mini Dental Implants
- Maintenance aspects, complications and clinical outcomes

EXPLORE THE CITY – BERN

**Course Objectives**

This course addresses general dentists and specialists who want to learn more about an evidence-based concept on the treatment of periodontally compromised patients, regenerative and plastic-esthetic periodontal and peri-implant surgery along with clinical concepts for the prevention and treatment of peri-implant diseases.

Starting with an overview on the anatomy, microbiology, etiology and pathogenesis of periodontitis and peri-implant diseases, the Bernese concept is based on comprehensive biological research of the last decades. It encompasses the most important aspects related to the diagnosis, treatment planning, nonsurgical and surgical therapy, use of systemic and local antibiotics, lasers and photo-dynamic therapy, regenerative and plastic-esthetic periodontal and peri-implant surgery in the overall frame of a comprehensive treatment concept.

Based on complex clinical cases, the various phases of periodontal therapy (i.e., systemic, hygienic, corrective, and maintenance) including implant therapy in periodontally compromised patients and their long-term maintenance will be demonstrated.

Hands-on workshops and high quality live surgeries will help to acquire in-depth knowledge about the use of ultrasonic and air polishing systems, laser and photo-dynamic therapy, resective and regenerative and plastic-esthetic periodontal and peri-implant surgery.

**COURSE TOPICS INCLUDE**
- Anatomy of periodontal and peri-implant tissues
- Biology of periodontal and peri-implant wound healing and regeneration
- Etiology, prevalence, microbiology and pathogenesis of periodontal and peri-implant diseases
- Treatment planning / Case presentations
- Nonsurgical periodontal therapy / old and new concepts
- Use of systemic and local antibiotics
- Lasers and photo-dynamic therapy
- Diagnosis and treatment of endo-perio lesions
- Chemical plaque control / novel strategies for biofilm management
- Flap designs and suturing techniques for resective or reconstructive periodontal surgery
- Rationale and surgical techniques for crown lengthening
- Treatment of furcations
- Regenerative periodontal therapy
- Critical evaluation of biomaterials
- Perio-Ortho considerations
- The Modified Coronally Advanced Tunnel (MCAT) and the Laterally Closed Tunnel (LCT) techniques for the treatment of single and multiple gingival recessions
- Treatment of soft tissue defects around implants
- Implants in periodontally compromised patients
- Complication management
- Long-term results
- Risk assessment and maintenance
- Live surgeries and hands-on workshops

A Solution, when there is none.
Throughout three days of an intensive course, a description of our experience of more than 25 years with zygomatic implants in the rehabilitation of the extremely resorbed maxilla will be shared. The participants will acquire knowledge regarding the use of zygomatic implants in different anatomic setups and their related prosthetic rehabilitation. We will discover different surgical techniques and their benefits and limitations including the classic intra-sinusal technique, the extra-sinusal technique up to the ZAGA philosophy. We will provide detailed insights into the latter in order to prevent surgical and prosthetic complications. Live surgery along with immediate prosthetic delivery will be performed and commented. Moreover, virtual zygomatic planning and hands-on training in customized artificial phantoms will be made available. Finally, individual surgical training on cryopreserved human heads will be offered.

**COURSE TOPICS**

**Day 1:**
- Live Surgery
- Social Dinner

**Day 2:**
- Radiological and clinical aspects of the paranasal sinuses
- Criteria of Success and Soft Tissue Management by Dr. Aparicio
- Immediate prosthesis delivery
- 3D Models Hands-on

**Day 3:**
- Hands-on Cryo-preserved heads

Hands-on Human Cadaver Course 2020
Advanced dental implantology including hard and soft tissue management

COURSE DESCRIPTION
In this two-day course you will learn and practice different bone augmentation concepts and soft tissue techniques to perform big augmentation procedures successfully.

COURSE TOPICS
The course focuses on state-of-the-art oral implant dentistry and advanced soft tissue reconstruction. The augmentation procedures will focus on the following:
- Bone Ring Technique (maxgraft® bonering) - including sinus lifting
- Shell Technique (maxgraft® cortico)
- Block augmentation (maxgraft® and maxgraft® bonebuilder).

Anatomical danger zones (lingual + inf. alveolar + mental + infraorbital nerve, palatine + facial + submental artery) will be dissected. Techniques for a tension-free wound closure and complication management will be discussed.

COURSE OBJECTIVES
It is highly practice-oriented and consists of approximately 80% practical application and 20% lectures, technical explanations and live/video operations. The hands-on training is performed on freshly frozen human heads. Two participants will work together on a human skull, which enables a ‘close to reality’ training of the surgical procedures. The speakers will show all techniques by live video transmission and will be around to support you together with the team of the center of anatomy.

EXPLORE THE CITY – VIENNA
About ILAPEO

LEVEL 2-3: GET EXPERIENCE – CLINICIAN

Educate yourself in ILAPEO – The Latin American Institute of Dental Research and Education. A rare opportunity to train with the elite masters and trainers in a renowned center of excellence in research, development and innovation in dental clinical practice.

The partnership between Neodent® and Ilapeo promotes continuing education courses based on three main objectives:

• Treatment experience: get confidence through a comprehensive practical education including patient treatment
• Treatment techniques: differentiate dental practice by offering patient most advanced convenient treatment technique such as immediacy
• Treatment options: increase the possibility of different treatments that you can offer to patient

THE INTERNATIONAL COURSES GUIDE COMPRISE:

• Immediate Loading technique with Neodent® GM implants: from surgery to prosthetic resolution
• Advanced surgeries - bone grafts with emphasis on sinus lifts
• Soft tissue grafts associated with implants
• Full arches with immediate loading: an immersion on Neoarch technique Immersion in prosthetic clinical workflow
• Neodent Guided Surgery
• Rehabilitation with zygomatic implants
Immediate Loading technique with GM implants: From surgery to Prosthetic resolution

LEVEL 2: GET EXPERIENCE - CLINICIAN

HIGHLIGHTS This is a next level course with patient care for professionals who already have experience in implants. Indicates for doctors that want to acquire experience in immediate loading protocols to deliver to patient’s in daily practice. Gain core knowledge in clinical workflow for single, multiple and full arch cases

The course with patient care for professionals who have placed dental implants especially in single and partial cases. Indicated for doctors that want to prepare themselves on state of the art Immediate treatments for single and partial cases; Immediate Loading technique with Neodent implants (single & bridge): from surgery to prosthetic resolution

During day three and four participant will perform two live surgical and prosthetic procedures, single and partial immediate rehabilitation on pre-selected patient provided by the Ilapeo Institute. The institute’s aligned focus is equipped to deliver the hands-on experience to ensure the development of incorporating the immediate protocol to your practice leading also to an understanding for more advanced surgical procedures. Immediate delivery of a temporary crown or bridge the day of surgery take patient service to the next level of specialized care.

This course is aimed at clinicians who already have placed implants.

THIS FOUR-DAYS COURSE WILL ENABLE PARTICIPANTS TO:
• Learn definition and principles in immediate loading pre-requisites for primary stability
• Execute surgical and restorative planning for single, partial and full arch treatment workflow using the immediate loading technique; Implant design & bio-engineering; Surgical techniques and prosthetic delivery
• Gain experience on techniques to understand the GM connection, the Helix hybrid implant, and all prosthetic components for analog and digital workflows.
• Understand how guided surgery could be a benefit for clinical team and patient.
• Neodent GM product line products used when applicable

Advanced Trainings

Selected experts allow you to set up customized individual training activities in their own practice on a 1:1 basis or a group arrangement with focused lectures on clinical protocols and solutions; hands-on live surgery treatments and/or marketing for the dental practice to increase patient flow and case acceptance.

Topics covered by clinical experts can vary according to your needs. Please find some examples below.

**PRACTICE MANAGEMENT TOPICS:**

- Marketing for the dental practice
- Increasing case acceptance / Facilitate the patient journey
- Grow your referral network
- Digital workflow how best incorporate in practice
- To create an exceptional experience by identifying expectations of the patient and the practitioner

**CLINICAL TOPICS OF INTEREST:**

- How to achieve long term esthetic solutions in the anterior maxilla, single and multiple tooth replacements
- Complex cases and how to handle these daily in your team and clinic
- Discover how full arch immediate protocols can benefit your practice
- Understand which patients are good candidates for immediate loading solutions
- Gain an understanding of new restorative techniques to maintain the peri-implant tissues
- Discovering the benefits of different materials, implant connections and techniques
- Digital workflow, its benefits for both clinical team and patient

Centers of Excellence for Education
Immediacy

ORIS Academy in Stavanger is Straumanns Center of Excellence and act as a training center for Immediacy treatments

The Straumann Centers of Excellence for Education are dental clinics selected for their ability to conduct high-level training and mentoring activities in the fields of oral rehabilitation and esthetic dentistry. The principle of this continuous education consists of addressing real life dental problems and producing treatment modalities that have a patient-centered approach.

Each Straumann Center of Excellence is part of a global education network spreading over 5 continents. This insures for clinical and educational best practice sharing, which consequently fuels each Straumann Center of Excellence both individually and collectively. This is why our training and education for immediate and full edentulous treatment protocols at these Centres of Excellence are truly outstanding.

Oris Dental is extremely proud of its educational activities that culminate as the Oris Academy. Their tailor-made course program is for Oris employees and includes shadowing other dentists at other Oris clinics in Norway.

The external courses have been very popular and well received both on an educational and social level. They use their own internal resources and clinicians to pass on and share knowledge, whilst keeping things fun and interesting. This allows everyone visiting Oris Academy to grow and stay connected as part of active and expanding professional team.

At Oris Academy many courses are held per year that include; hands-on surgery and training, lectures and live treatment. Academy speakers are clinicians with both breadth and depth of experience and knowledge within all fields of dental implantology.

GET EXPERIENCE – CLINICAL TEAM

AMERICAS

Dr. Riad Almasri
He is a specialized Prosthodontist who practiced general dentistry for several years prior to entering Nova SE University College of Dental Medicine, where he received his specialty certificate in Prosthodontics; serving as a Chief Resident. He is currently an Adjunct Faculty member of the College of Dental Medicine’s Post-Grad Prosthodontic program. In addition to private practice, Dr Almasri served as a Clinical Assistant Professor at Baylor College of Dentistry, Dallas, TX. He has also established the FastNewSmile® for immediate load. Dr. Almasri has published in internationally renowned journals and he is an active member in several associations & dental societies.

TOPICS
• How to optimally incorporate full arch immediate protocols, both surgical and prosthetics, in the benefit of clinical team & patient
• For the heavily resorbed maxilla – The zygoma implants concept (including quad zygoma implants)
• IV sedation

Dr. Lee Fitzgerald
He got his Doctor of dental surgery degree at Baylor College of Dentistry 1985. After finalizing an Implant Dentistry course at University of Georgia 2017 his professional work in own dental implant practice and training center was initiated. Today Dr Fitzgerald is the owner of FORTE Dental Implant Center; FORTE – Fitzgerald Oral Rehabilitation Treatment & Education and for total Esthetics the FORTE Onsite Lab located in Plano, Texas. He is also a member/fellow of many prestige associations both national and international.

TOPICS
• How efficiency in edentulous protocols with ProArch can minimize treatment time and trauma to the patient
• Immediacy in protocols requires team work including all members of the treating team - What to consider when you start
• Biologically driven implant therapies – What materials and techniques do we have available today
Dr. Donald Ross
D.D.S. Pros Cert. is a graduate of the University of Iowa College of Dentistry. His clinical expertise specifically lies in all aspects of the full arch fixed-implant-bridge (ProArch or All-on-4) procedure from start to finish. He lectures nationally on the topic and has completed over 2000 arches to date. He is the host of the “50 Million Arches” podcast that serves the niche edentulism market with commentary, interviews, training and resources. He founded Digital Ape Full Arch Solutions in 2016, which provides high-end service, protocols, support, and training to dentists and their staff so that any dental office can provide this treatment to their patients in a simple and profitable manner.

TOPICS
- Learn from the experts in team how efficiency in protocols can maximize treatment outcomes for both clinician and patient
- Understand all clinical and laboratory aspects of the ProArch treatment protocols from start to finish including; materials, planning and sequencing, treatment efficiencies, surgical concepts, digital guides, laboratory processes, economics and profitability = The blueprint of the entire workflow process to prepare yourself and team for this exciting edentulous journey
Individual arrangement with experts

GET EXPERIENCE – CLINICAL TEAM

EUROPE

Dr. Joe Bhat
He qualified in 1992 and trained in Oral and Maxillofacial surgery at some of the UK’s leading units. Dr Bhat is a Fellow of The Royal College of Surgeons, England and is a Specialist in Prosthodontics and Oral Surgery. He is currently an Hon. Visiting Professor at MM University, India. He is an ITI Fellow and his clinical time is spent as a private referral practitioner. For the last 20 years he has specialized in the management of complex restorative problems and in the placement and restoration of dental implants.

TOPIC PROPOSALS
- Learn from the expert how Neodent® GM as a treating tool can be used to facilitate for optimal esthetic outcomes
- How efficiency in protocols can maximize treatment outcomes for both clinician and patient
- Plan from the tooth to reach excellence in esthetics – its step-by step for clinician & dental technician

Dr. Hannes Wachtel & Team
The expert and team have treated over 1000 patients with immediate restorations since 2007 with very high success rate. During the early days the restorative complications with fractures of the prostheses happened and they have over the years adapted to improved concepts. Digital workflows are now part of their daily practice to secure treatment outcomes. The close collaboration to the dental lab has enabled the team to improve the treatment concept continuously.

TOPICS
- Learn from the experts how efficiency in protocols can maximize treatment outcomes for all indications
- Why implementation of direct B2C marketing concepts and 5 treatment coordinators can facilitate for & guide the patient through the whole treatment.

Educational Pathways for professional growth.
FOR THE ENTIRE DENTAL TEAM

Practice Management

These courses help the participants to grow professionally and financially by covering a variety of different topics designed to the entire dental team.
The SPEAR Model is aimed at all members of the dental team who want to grow their business by increasing their skills in Marketing for the dental practice & Increasing case acceptance.

MODULAR COURSE PART OF STRAUMANN® SMART
This 13 module course will provide the practitioner with an overview and appreciation for growing a practice with intention for enjoyment. It will identify the different values patients have for care and help create a plan to incorporate all of them into every practice by systematically clarifying expectations, resulting in clear conversations with every patient.

LEARNING OBJECTIVES:
- To examine the Spear model for practice growth specifically development and enjoyment with intention
- To identify levels of patient value for care
- To create an exceptional experience by identifying expectations of the patient and the practitioner

PATIENTS EXPECTATIONS ARE CREATED
- Past Experience
- Through Marketing
- Word of Mouth
- From Colleagues

EXPECTATIONS FOR FIRST TREATMENT
- Length of time
- Get to know you/review concerns
- Necessary radiographs
- Comprehensive exam
- Review of findings/tour of mouth
- Consequences of no treatment
- Treatment options and benefits
- Possibility of extra records

Structured step by step approach fully aligned in team to support the treatment

Strategic Approach to Case Presentation: Getting Your Patients to Say "Yes"

Course Objective
Presenting dental treatment to patients can be uncomfortable and often quite intimidating yet is absolutely essential for the financial well-being for any dental office. So much is depending on the outcome. Many of us have been put in this role without any formal training or guidance with little or no tools at our disposal. This one day course is designed to provide an environment of education and support for staff members that are asked to present treatment to patients. Best practices will be discussed and considered, as well as ways to develop in-office protocols that will maximize your chances of success.

Following completion of this program you will be able to:
- Understand and identify the common barriers to case acceptance
- Develop strategies to overcome the barriers
- Develop an effective patient journey
- Have the tools necessary to effectively communicate with your patients

This course is meant for Treatment Coordinators

Refunds/Cancellation
In case of cancellation by registrant, refunds will be issued if received no later than one week prior to the start of the first session. Genesis Continuing Dental Education reserves the right to program cancellation and will not be responsible for expenses incurred by registrant.
Don’t miss –
Next Generation Dentistry portfolio

Caries
- Digital diagnostics for early caries detection
- Biomaterials for enamel remineralization and regeneration
- Caries dentin removal with less drilling

Implant solutions
- Training: Straumann® Smart equips dentists to successfully begin placing and restoring dental implants in straightforward cases
- Placement: Straumann® Mini Implant System for an immediate removable fixation of overdentures

Digital workflows and services
- Cost-effective, efficient, and easy-to-use solutions for intraoral scanning and in-house milling

Periodontitis and peri-implantitis
Digital and in-vitro diagnostics for periodontitis/inflammation detection
- Solutions for effective biofilm removal
- Promotion of periodontal and peri-implant health

Professional teeth whitening
- Peroxidase-free teeth whitening

Prosthetic solutions
- Tooth- and implant-supported prosthetic solutions, from chairside to the Straumann’s centralized production services
- Straumann® n!ce® fully crystalized glass-ceramic for enhanced esthetics

Ortho
- Invisible and removable orthodontic solutions
