

Ready for takeoff.

Introducing

clearpilot

The latest treatment tool from ClearCorrect.

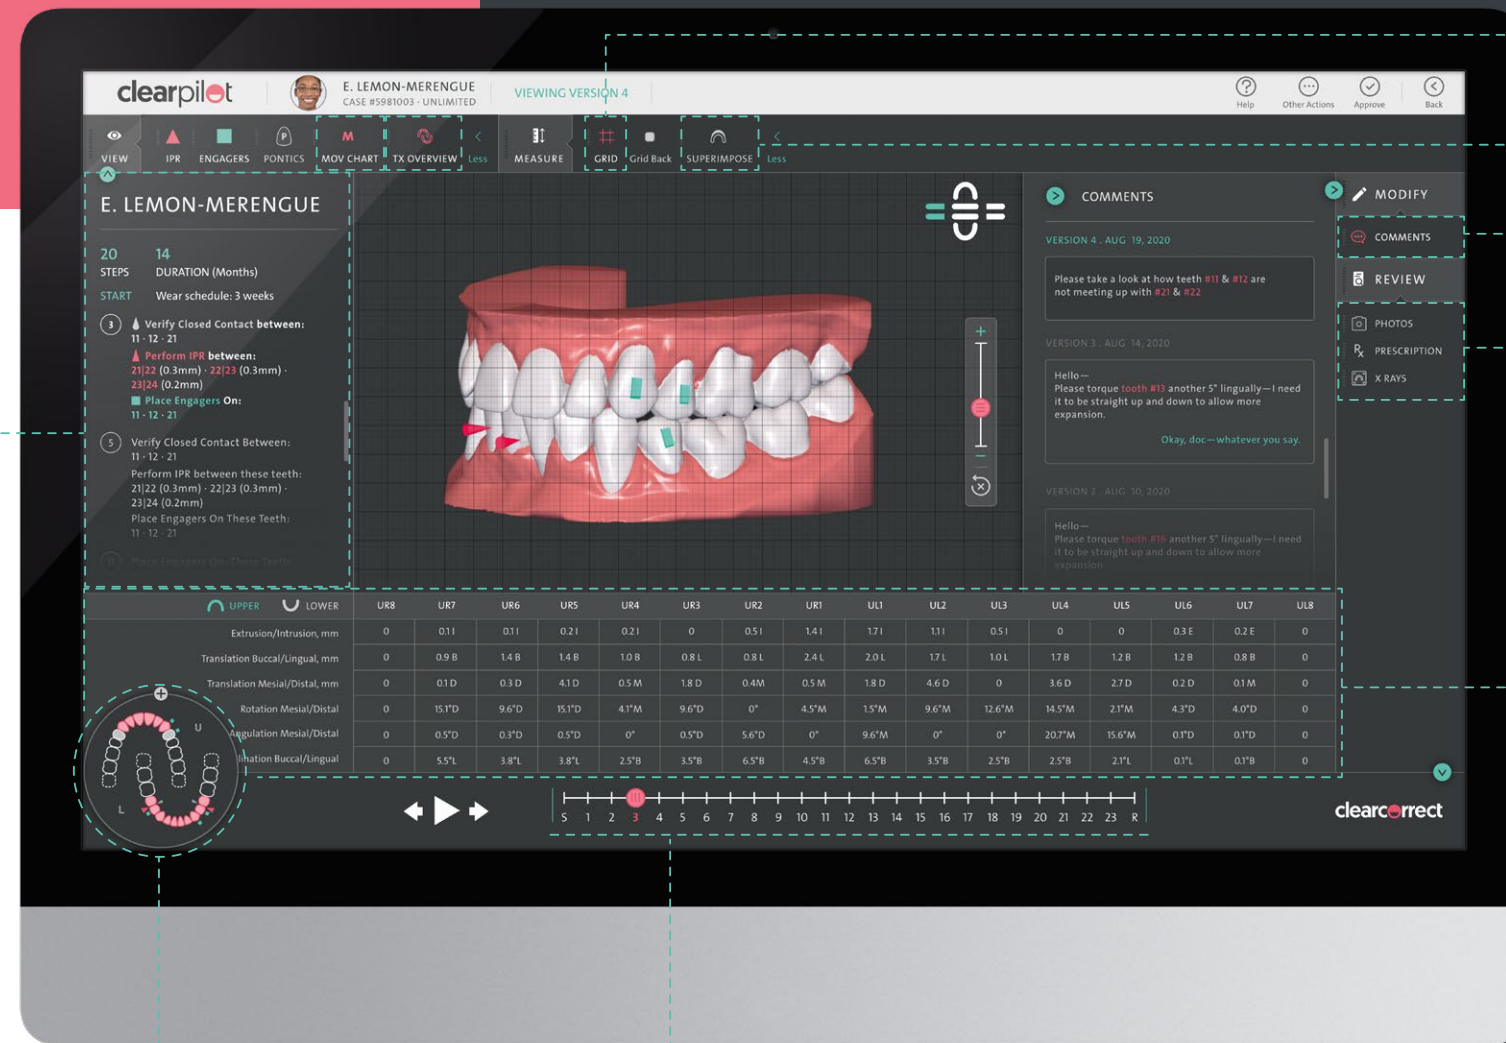

Full-throttle treatment planning.

It's nice to be a passenger sometimes, but as a clinician, **you're the pilot.** That's why we made ClearPilot: to put you in the cockpit so you can take control and easily get a thousand-foot view of all the details of your treatment.

With more information at your fingertips, a brand new look, and helpful user interface, ClearPilot gives you more visibility and responsive control as you review and approve your clear aligner cases.

Most importantly, ClearPilot is web-based, so you'll always have the latest and greatest updates, without any need to download or upgrade anything on your end.

Treatment overview panel: spells out all recommended procedures over the course of treatment.

Treatment illustration: shows what's happening at each step of treatment so your patients can understand more easily.

Treatment timeline: play through each step of treatment, and the model in the main window will reflect planned movements, including engagers, IPR, and pontics as prescribed.

Millimeter grid: just how much overjet are you leaving? Just how much space needs to be closed? This feature will cut down on guess work.

Superimposition: activate this feature to compare any step to the starting position of treatment.

View all comment history, from your first round of edits all the way to the current version, including technician responses.

Side-by-side comparison: photos, prescription, and x-rays are readily available while evaluating your treatment plan.

Tooth movement chart: displays total movement planned at the end of treatment, as well as movement planned for each step.

At ClearCorrect we're committed to our mission of constantly listening to our clinicians feedback, to continue to improve their experience and provide the tools they need to move their practices forward. The ClearPilot platform is *alive*, and new features are already on the horizon, so keep an eye out for the next exciting update!

Here's to the next leg
of your trip—happy
treatment planning.
